

James' Work

James thought he knew how to add and subtract decimals.
He handed this work to his teacher.

$$\underline{8.04} + 0.17 = 8.21 \quad 8.21 - 3 = \underline{5.21}$$

$$\underline{2.29} + 0.1 = 2.30 \quad 2.30 + 2 = \underline{4.30}$$

$$\underline{0.23} + 0.12 = 0.35 \quad 0.35 + 9 = \underline{0.35}$$

$$\underline{7.32} + 0.2 = 7.34 \quad 7.34 - 1 = \underline{6.34}$$

$$\underline{3.31} - 0.3 = 3.28 \quad 3.28 - 12 = \underline{5.28}$$

$$\underline{8.28} + 0.3 = 8.31 \quad 8.31 - 5 = \underline{3.31}$$

Use your calculator to check James' work.

In this space, tell James what you like about his work.

In this space, explain to James what he still has to learn.
